

Internship Test

ReactJS Developer Profile Set-2

We would like you to create a 2 screen React JS application using this API:

<https://api.tvmaze.com/search/shows?q=all>

Please visit this API endpoint to understand the structure of the response.

We need you to create a basic UI to display the show names and a few details about it (you can choose what you want to display along with the show name). Include a button for each of the shows to redirect the user to another screen that shows the summary of the particular show. (Refer to the api structure. You will find a summary section for each show there.). We need you to complete this assignment and upload it to a GitHub Repository marked as **Public** and email us back the link to the repository (check the contact section for the email address).

Please note:

- It has to be a React JS application.
- It has to implement the API and not just hardcode data from the API.
- It has to have 2 screens at a minimum. One to display a few data and possibly an image(UI is completely up to you) and another screen to show it's summary. The second screen should have a button to book a movie ticket which will open a form with the movie name already present and a few relevant details. (Reload should not happen)
(Use local/session storage for storing user details)
- A proper UI so that we know you have a good understanding of UI/UX. Doesn't need to have mind blowing animations but just basic HTML and CSS styling that looks good (You may use bootstrap).
- Please use proper Component file structure.
- Submit your project via this form:
<https://docs.google.com/forms/d/e/1FAIpQLSeQ-9PffLbFkzTFfNNv6SqmlyKhV8OT5TJVkPiHBOq9G1-YTQ/viewform>

You will be provided with a maximum of 24 hours to complete this task after which your application will automatically be canceled.

CONTACT

Please feel free to contact us in case you have any questions regarding anything about this internship at hr.quadbtech@gmail.com. Please put "React JS Internship" as the email subject so that we can filter out your submission/question before anything else.
